

OVERVIEW

- Full-stack developer with hands-on experience in AI-powered applications using Python, Django Rest Framework, ReactJS, and LangChain.
- Proficient in building scalable web apps, integrating AI assistants, feedback systems, and implementing RAG for contextual responses.
- Strong knowledge of Docker, REST APIs, MySQL, Git, Linux systems, and deploying applications across diverse OS platforms.
- Experience in embedding-based search with LangChain, vector DBs (Cassandra), and building training feedback loops for AI models.
- Demonstrated ability to design and build performance dashboards, student monitoring systems, and dynamic admin panels.
- Passionate about building solutions that enhance user experience, improve automation, and simplify infrastructure.
- Ability to work on multiple projects at the same time and complete tasks promptly.
- Profound ability to work independently and with a team.

BUSINESS APPLICATIONS WORKED ON

- Visual Studio Code
- Postman
- Figma (for UI design)
- Git & GitHub
- Docker CLI
- Cassandra DB Studio
- Android Studio

KEY SKILLS

- Web Technology: HTML, CSS, JavaScript, Web APIs (Django Rest Framework)
- Designing: Figma Designing
- Languages: Python, JavaScript, PHP
- Frameworks & Libraries: Django Rest Framework, ReactJS, Tailwind CSS, Redux Toolkit
- Database & APIs: MySQL, PostgreSQL, REST APIs, Axios, Cassandra (Vector DB)
- DevOps & Tools: Docker, Git, Nginx, IIS Server, Web Socket
- Deployment: Ubuntu, CentOS, Windows VPS
- Platforms: Linux (Ubuntu, Alpine), AWS EC2

PROFESSIONAL EXPERIENCE

- Led full-stack development using React and Django DRF for scalable AI-driven web apps
- Built an AI Coding Assistant and a chatbot with debugging, learning analytics, and feedback.
- Implemented RAG using LangChain + Cassandra DB; created vector store pipelines.
- Containerized and deployed apps on Linux VPS with Docker; improved deployment cycles.
- Designed a training mechanism to enhance the chatbot's context awareness and accuracy.
- Developed dashboards for tracking accuracy, usage trends, and feedback insights.
- Developed 6 feature-rich web apps (90+ pages) using ReactJS and Tailwind CSS.
- Integrated 100+ APIs via Axios for optimized data rendering.
- Enhanced UX with clean UI components and Redux-based state management

CORE COMPETENCIES

Analysis & Design:

- Regularly communicate with clients to gather requirements. Analyzing the requirement and providing the best possible solution.

Project Execution:

- Coordinating with the team for project implementation discussion.
- Briefing the team on the Project details and deadlines. Managing task distribution.

Application Support

- Monitoring and resolving issues reported by clients and ensuring timely resolutions.

PROJECTS

Project I: AI-Powered Website Chatbot with Feedback Loop

Role: Full Stack AI Developer

Description: Developed AI chatbot application using GPT + LangChain with RAG. This application will be used by website visitors for chatting on the website. The AI chat bot will answer the questions asked by website visitors. The Chat bot will scrap the data on the website, PDF and Excel. All chat history will be maintained in the application. A Training model was build where we can train the BOT to give correct answer to the query typed in the chat bot

Technology: React JS, Django Rest Framework, LangChain, RAG , Chat GPT

Responsibilities:

- Scraped and cleaned website content, converted it into embeddings using the OpenAI API.
- Stored vector data in Cassandra DB using LangChain integration for efficient semantic retrieval.
- Built backend endpoints for chatbot query handling and feedback capture in Django DRF.
- Designed frontend chatbot interface in ReactJS, integrated with backend via Axios.
- Implemented training workflow to allow admin correction and regeneration of embeddings.
- Monitored system performance through dashboard visualizations and feedback trends.

Project II: AI Coding Training Assistant

Description: A web-based AI training app made using ReactJS and Python DRF with GPT integration. This app is used by the students to practice on coding and its support coding practice in ---C, C++, C#, Java, JavaScript, Golang, Php and Python languages .We have created all scenarios and question in this apps and students need to create the codes as per the given scenario, The AI assistant will check the codes and will indicate the mistakes in the code if any and give the correct solution along with explanation to code to achieve desired results. It authenticates students, track their active time, monitor their overall activity and tracks their progress

Technology: React JS, Django Rest Framework, LangChain, Chat GPT

Responsibilities:

- Understand business requirements and develop the customer-facing pages as per requirements. Understand different business scenarios and create system designs to cater to all them business scenarios.
- Developed full-stack platform with ReactJS frontend and Django DRF backend.
- Created a code editor with error detection and AI-driven debug suggestions.
- Designed user authentication, time tracking, and session logs for activity monitoring.
- Built an admin dashboard to upload and categorize questions.
- Enabled analytics for student performance and system feedback accuracy.
- Integrated GPT model to offer contextual coding hints based on submitted code.
- Actively involved in providing technical support for the application by troubleshooting and resolving the issues.

Project III: Chat Application

Role: Android App Developer

Description: A web-based chat application has been developed to showcase real-time messaging capabilities. The backend of this application is built using Java, which handles all the server-side logic and communication between users. Firebase is used for authentication, allowing users to securely log in and register, and also for data storage. Firebase's real-time database ensures that messages are instantly synchronized and displayed to all users without the need to refresh the page, providing a seamless chat experience.

Technology: Java, Firebase (Authentication and Database), Android

Responsibilities:

- Designed and implemented interactive chat interfaces using XML layouts and Android components like RecyclerView, EditText, and CardView.
- Integrated Firebase Authentication for user login/signup, Firebase Realtime Database for real-time messaging, and Firebase Storage for media file uploads (images, etc.).
- Implemented logic to send, receive, and display messages in real-time, including timestamps and message status.
- Created features for user profile setup, displaying contact lists, and managing sessions securely with Firebase Auth.
- Used Android Logcat and Firebase debug tools to identify and fix issues, ensuring smooth performance and real-time sync.
- Optimized layouts and background data syncing to enhance responsiveness and reduce battery usage.

Project IV: eMeds Application

Role: Android App Developer

Description: eMeds is an Android application designed to assist users in making informed decisions about their medications. The app allows users to search for specific medications, view ratings and reviews from other users, access information on possible side effects and drug interactions, and receive suggested dosages and usage instructions. Additionally, users can create profiles and view current prices of medications related to specific diseases. The app aims to improve medication safety and empower users to make informed health decisions through a simple and intuitive interface.

Technology: Java, Firebase (Authentication and Database)**Responsibilities:**

- Designed and implemented user-friendly interfaces using XML layouts and Android components to facilitate easy navigation and interaction.
- Integrated Firebase Authentication for secure user login and registration, Realtime Database for storing and retrieving medication data and user reviews, and Firebase Storage for handling media uploads.
- Developed functionalities for searching medications, displaying detailed information, managing user profiles, and viewing medication prices based on diseases.
- Ensured real-time synchronization of data between the app and Firebase, handling data retrieval and updates efficiently.
- Conducted thorough testing to identify and fix bugs, ensuring the app's stability and performance.
- Optimized app performance by managing background processes and ensuring efficient data loading and rendering.

EDUCATION / QUALIFICATIONS

Bachelor of Technology in Computer Engineering
